

Rund-Profil

Das Rund-Profil ist ein Flächenabstandhalter und wird in Fertigteilwerken und im Bereich von Bodenplatten bei liegender Bewehrung eingesetzt. Die runde Aufstandsfläche eignet sich um Lasten flächig in den Untergrund einzuleiten. Das Rund-Profil ist stabil und gut belastbar. Es eignet sich zum Einsatz bei mittelschwerer Bewehrung und dort wo hohe Verkehrslasten auftreten. Eine schnelle Montage ist garantiert. Es besteht auch die Möglichkeit die Rund-Profile in Kurzstücken gemäß dem DBV Merkblatt Abstandhalter herzustellen ($L < 350$ mm).
